

Hung Chi Hsueh

Experience-focus web developer

📍 台北,台灣 | 📞 +886937373214 | @ hungchihsueh@proton.me | 🔗 <https://hungchihsueh.com>

Summary

A front-end developer with over **three year** of professional experience in Taipei, proficient in React.js, Next.js, and Vue.js, focused on creating engaging user experiences, skilled in component system construction, website optimization, and cross-team communication, dedicated to achieving excellent digital experiences through precise coding and innovative solutions.

Profiles

🌐 [hungchihsueh](#) [in](#) [Chi-Hsueh \(Chris Hung\) Hung](#)

Experience

聚昇國際 Dec 2024 - Present
Front-end Engineer Taipei, Taiwan

TPPay
Maintain the existing cryptocurrency trading platform frontend, collaborate remotely with mainland China team and designers, update the main visual design, and optimize user experience.

自雇接案 Jun 2024 - Dec 2024
Front-end Engineer Taipei, Taiwan

Collaborated with startups and design teams such as [CocoTrees](#) and [Devellen Design](#), participated in web app development, responsible for frontend development and programming, and assisted with backend API integration, implementing client requirements according to the UI designer's Figma designs.

WisdomeAI Oct 2023 - Jun 2024
Front-end Engineer Taipei, Taiwan

🔗 <https://brainboxai.app/>
As the Front-End Architect for this educational technology platform, I designed architecture using Next.js with AWS Amplify, working with back-end engineers to implement Fernet encryption for data security. I collaborated with the machine learning team on question generation interfaces, leveraged MDX for SAT questions and mathematical formulas, and developed reusable UI components based on Figma designs, ensuring consistent visual styling and smooth user experience.

Meet.jobs Mar 2023 - Oct 2023
Front-end Engineer Taipei, Taiwan

🔗 <https://meet.jobs>
In this talent search system project, I worked closely with machine learning engineers, taking responsibility for website UI/visual design, front-end performance optimization, and API integration. I utilized Vercel for rapid deployment iterations and updates, while maintaining and enhancing the meet.jobs website and internal employee tools, continuously improving interfaces and developing new features based on user and colleague feedback to ensure the system met diverse requirements.

Hannee Design Apr 2022 - Feb 2023
Front-end Engineer Taipei, Taiwan

🔗 [hannee design](#)
As a Front-end Engineer at Hannee Design, I managed several key projects, including developing the ACES B2B System for McKinsey&Company by implementing API integration, functionality testing, and creating PCB size calculation tools with konva.js; building features for SiCar's used car trading platform using NuxtJS while coordinating with designers, clients on transaction workflows, and back-end engineers on API structure; supporting the National Science and Technology Center for Disaster Reduction's accessible disaster prevention website by implementing WebP for improved efficiency, creating animations with GSAP and CSS, and developing horizontal scrolling responsive design; and developing interfaces for Systex's green energy monitoring software by creating pages based on Figma designs and developing reusable components.

iDaka Jan 2022 - Apr 2022
Front-end Engineer Taipei, Taiwan

🔗 [idaka](#)
As a Front-end Engineer at iDaka, I independently handled all front-end development and interface design work, using React framework to build a new website from scratch based on existing product business logic, ensuring excellent user experience and performance. After confirming company and client requirements, I coordinated with back-end engineers on database architecture and API specifications to develop and implement new features.
